

Welcometothe2008BIGDIGDIARY

HerearethewordsandpicturesfromtheBIGDIGBLOG, summarisedasadigdiary.

St. Cross Hospital was founded about 1136 by Bishop Henry de Blois. It was more a retirement home than a hospital in the modern sense, as its main purpose was to look after 13 poor and ailing men of good character, and hospitality to travellers, a tradition that is continued today by the provision of the 'dole' of bread and ale.

(Techer Jones)

The church was begun in the 12th century but not finished until the 13th. The other existing buildings, forming three sides of a quadrangle, date mainly from the 15th century and were probably the work of Cardinal Beaufort at the time of the second foundation of 1445. These buildings continue to provide accommodation for the Brothers.

The land to the south of the Hospital buildings, known as 'the Park', contains a number of intriguing bumps and hollows which are likely to contain clues to the long history of the area. They had not been archaeologically investigated until last year when WARG began geophysical survey and small-scale excavation. This work has been expanded in 2008 to explore some of the key landscape features.

Sponsorship

WARG was lucky and extremely grateful to individuals and organisations who have kindly donated funds to allow our dig to happen.

Preparation

On Wednesday and Thursday 23rd and 24th July, all the team met to discuss the project and each other. Dr. John Crook, archaeologist-in-residence at St. Cross (or so it seems) gave a talk on its history and the background to what we

volunteers met up at Hundred Men's Hall at St. Cross to find out more about the project. He also gave a talk on its history and the background to what we

Other contributions over the two evenings told the diggers about the planned trenches, the geophysics, findings and processing and Ken Qualmann, overall site director described the "conduct" of the dig, including the all-important Health & Safety.

Don and Dick gave a summary of the plans for this year and Giles filled us in on some of the more technical aspects we'd all encounter.

2nd August 2008

Today we re-opened, on a larger scale, two of last year's interesting things. Trench 5 appears to be revealing already down to the layer of rubble found last year.

Our re-evaluation trenches, and immediately began finding deep features, as well as building rubble. Trench 3 has revealed more fragments of floor tiles.

The dig began in earnest with a dozen volunteers braving the forecast and the rain to begin work on the two largest trenches. The westerly one straddled a supposed boundary ditch and much mattocking and earth-shifting started to show the ditch structures.

Two

Further east, our second trench is positioned over a trench which revealed decorated tile. Hopes were high found three pieces of medieval decorated tile, possibly with the same derivation as some of those in the church. Further research will allow that to be tested.

It is a putative fishpond, and the subject of a 2007 survey for some interesting finds here, and we have so far

Meanwhile, we are now in the hands of the weather. Julia continues to ply us with tea and biscuits. Ahap

So far we've lost not a moment to the rain, motivation is high, and

high, and

Sunday 3rd August

Today we continued with these trenches, particularly working on recording, and set out Trench 4. The total station was set up, and surrounded by its own anti-collision warmour as Garrard, newly returned from archaeological work in Iran, got to work enabling the positions and heights of the trenches and finds to be recorded.

Meanwhile, an ample number of diggers got to work turning over the topsoil. Trench 5 has provided a clear differentiation between ditch and bank material, with some areas of possible burning being revealed. The plan over the next few days is to put in a metre wide section (more mattocking) to reveal the depth of the ditch and its relation to the surrounding boundaries and pathways.

Trench 3, on the east of the site, provided the most decorated tile, but today it came thick and fast. It was all fragmentary, indicating that it had been part of a dump of material, possibly to create a platform.

diggers with the most finds. Our 2007 dig had produced part of a

With shards of medieval pottery, and bits of what a few thought to be stained glass, everyone was satisfied with the day's proceedings, some more than others.

And for the most part the rain held off, until about five-thirty, by which time any digger worth his or her salt was either in the shower, or in the pub!

Monday 4th August

The heavens were not good to us today. A series of heavy showers dampened spirits a little, but still good progress was made, and magnetic resistivity work started.

heavy showers dampened spirits a little, but still good progress was made, and magnetic resistivity work started.

In trench 5 a metre wide half section was begun across the site. There is clear evidence of burnings suggesting its use as a disposal pit.

That now appears to be a quite massive 4m wide ditch over time as a disposal pit.

Trench 3 (below) was the scene of continued trowel cleaning and the full extent of the feature is exposed. Yesterday's finds were ably cleaned by Kerrie and will be a central part of our presentation to the public at the coming Open Days. Also Trench 4 was de-turfed in readiness for opening on Tuesday with an initially more focussed extent.

ning and the full extent of the feature is exposed. be a central part of our presentation to the public at the coming Open Days. Also Trench 4 was de-turfed in readiness for opening on Tuesday with an initially more focussed extent.

Morale, as they say, remains high!

Tuesday 5th August

Today those heavens finally opened up and drenched the site. Little progress was made, but I think you will agree that the decision to abandon work for the day was the best to try and keep the trenches clean and not damage the archaeology too much, and also for the safety of our volunteers.

Today those heavens finally opened up and drenched the site. Little progress was made, but I think you will agree that the decision to abandon work for the day was the best to try and keep the trenches clean and not damage the archaeology too much, and also for the safety of our volunteers.

Tomorrow is another day.....

Wednesday 6th August

...and so it proved to be. The rain held off and there were brief periods of brightness. Enough to get stuck into the new trench, Trench 4, which immediately began to show up the square feature we have seen on the magnetic resistivity maps. Also a potential wall made an appearance and a gravel surface which could be a pathway along side the wall.

A new angle on things was enabled by Techer Jones who managed to wangle a trip to the top of the church tower for a bird's eye view of the Trench 4 proceedings.

Trench 5 continued to intrigue as we took the one metre continues down, while the west bank looks distinctly unimplying indeed that the now-disappeared allotments debris in an unsorted manner. Blimey, Techer got a

section down. The made-up eastern side of the ditch is made and more of a build up of continuous scatter, may well have been clearing the land and depositing shot of that too!

Thursday 7th August

A new trench, Trench 6, was opened and we immediately found what might be a wall, matching last year's resistivity and an 18th century map. In Trench 3, recording continues and digging through rubble layer is producing an interesting mix of material. In Trench 5 more work continues on examining the in-filled ditch, although the extension is running into serious tree roots. In Trench 4 we are still looking at the flint and gravel, tentatively a wall and a path, uncovered earlier in the week.

Friday 8th August

The new trench, Trench 6, continues to reveal the wall that matches last year's resistivity and an 18th century map. Close to it is a mix of bottle glass and old clay pipes. In Trench 3 digging through the rubble layer is producing a combination of material both across the medieval period and from the 19th century. In Trench 5

more work continues on examining the in-filled ditch. Trench 4 has been revealed as a series of layers of

What was identified tentatively as a wall and a path in a nearly ditch.

Saturday 9th August

The first of our Open Days, dozens of hardy visitors braved the increasingly wet and windy weather to watch what was going on and marvel at the professionalism

of the sodden scrapers.

The forecast wasn't good, but it didn't stop dozens of interested members of the public and friends of history to look at what we've been up to.

of interested members of the public and friends of history to look at what we've been up to.

Hampshire Field Club set up an information point to give our finders a stable and people were welcomed and given a guided tour of the trenches by our volunteers.

In Trench 5 Giles swung the mattock to section the west side of the ditch, and in Trench 4 Techer and Garrard

handed the ditch in fill. On Sunday we, and the public, hoped for even more engrossing.

Sunday 10th August

Sunday's weather bodewell for a busy second Open Day, all the volunteers giving the guided tours were kept busy and some trench supervisors spent the entire afternoon telling the public what was being revealed by their particular hole in the ground—although some fanciful explanations were heard emanating from Trench 4 with its 1950's maypole posthole!

nd interest was high from the off. In the afternoon busy and some trench supervisors spent the entire by their particular hole in the ground—although some fanciful explanations were heard emanating from Trench 4 with its 1950's maypole posthole!

We were also joined by such luminaries as Graham Scobie, Dick Whinney and Steve Teague who were much impressed by what WARG has achieved in just a week.

e, Dick Whinney and Steve Teague who were much impressed by what WARG has achieved in just a week.

While all the Open Day fun was going on, work in the trenches carried on with renewed vigour in the patchy but welcomes sunshine. Trench 5 became the scene of frantic mucking to try and find the bottom of the ditch and the natural. This section of Trench 3 was completed, a

Tuesday 12th August

Well into the second week now. Nobody's fallen out too parts of the jigsaw are falling into place. In trench ch5, the ditch separating the St. Cross land from the King's possibly defensive structure. Not unreminiscent of Oram natural...

much, things are starting to resolve themselves and the ditch now seem to be two ditches: a wide boundary highway, which cuts into an earlier, more steeply sided ditch, possibly a moat which has eroded into the ditch by the south range—the result of its removal in 1789.

Massive reworking of Trench 4 has revealed a rubble-filled ditch, possibly a moat which has eroded into the ditch by the south range—the result of its removal in 1789.

Massive reworking of Trench 4 has revealed a rubble-filled ditch, possibly a moat which has eroded into the ditch by the south range—the result of its removal in 1789.

In the Trench 3 section further work was done to establish the level of the pre-dump ground, and also came up with our most spectacular find to date—a two-thirds complete, though unfortunately headless, bird of prey design, so very similar to those of the Retrochoir in Winchester Cathedral.

In the Trench 3 section further work was done to establish the level of the pre-dump ground, and also came up with our most spectacular find to date—a two-thirds complete, though unfortunately headless, bird of prey design, so very similar to those of the Retrochoir in Winchester Cathedral.

The surfaces in Trench 6 are now being examined in more detail to try and establish the form and function of the walls and buttressing, and work started on Monday at the west door of St. Cross Church, an opportunity given by the necessary construction of a wheel-chair ramp.

Here in Trench 10 it was hoped to find evidence of a connection between the south range and the church buildings. Not only do we appear to have found such evidence in the form of a porch, but a stone pathway leading to that doorway. This meticulously dug trench is proving to be a real connection with the people who lived here thus far seem to have been represented by demolition rubble and tantalising glimpses into Medieval life at St. Cross.

Wednesday 13th August

On Wednesday, The Mayor of Winchester, Cllr Michael Rea, arrived to see what was going on, presumably because he's been reading the WARG BLOG.

He spent time with Dick et al examining the trenches and chatting with diggers. Seen here by the side of Trench 5, which sees one of the Don suits tattered as the trench hits the 2m mark.

Saturday 16th August

As we head towards the end of this summer's project, so "digging" is being replaced by recording, before we refill in the trenches. Recording includes both photography and very detailed drawing, ensuring that future archaeologists can have an accurate picture of what we have discovered. Work started on restoring Trench 3, and will soon be in Trenches 4 and 5. Trench 6, with the 15th century garden wall and evidence of smoking and drinking, will be the last to be closed.

This was the scene today of the main body of work, with small finds, mainly of glass bottles and coloured glass. The quantity of finds and the necessary care to be taken in the excavation is evident. Some idea of the task can be seen in the

the top context being cleared back exposing over 250 red ceramics. Clay pipes were in profusion and the sheer volume of their recording seemed to slow progress as time begins to break. See the shot below.

Yesterday, Trench 7 was opened in the south-west corner. It was a connection between the garden wall we found last year and the current boundary of the gardens. So it proved to be a multi-phase wall has appeared which a surveyor and technical artist on site in the shape of a trench away for further interpretation.

of the Brothers' gardens, to establish whether there were any connections between the current boundary and the current boundary of the gardens. So it presented quite a conundrum. Having a trained archaeologist on site in the shape of Geoff paid dividends as this evidence can now be taken into account.

Part of the wall (far lower than the present ground level) was finely dressed, making it more than just a

level) was finely dressed, making it more than just a

Our opportunity to dig in the vicinity of the St. Cross Church predicted—of the remains of the front of the south range (below) which appears to lead to a blocked doorway into a larger cobbled courtyard which was later replaced by a path. Excavation has stopped, and detailed recording is underway to help with the work of building the wheelchair access, and whether to

the St. Cross authorities decide how best to continue their work. A porch has been uncovered by Ken Qualmann in the west wall on the church. The associated "pathway" was replaced with the grassed quadrangle. Excavation has stopped, and detailed recording is underway to help with the work of building the wheelchair access, and whether to undertake more in-depth work.

Sunday 17th August

The party's over for another year. Today after some frantic last minute trowelling, cleaning and recording in our hard won trenches, and returning the field to a state which would content the cows (and the horses that think

sit'sacow).

Before the relaxation, though, the study continued. Trench 6 had brought up some near complete clay pipe bowls, which Winchester Guide Mike was able to pin down to the 17th century Winchester pipe manufacturer Richard Waldron. Comparing the finds we were getting of small finds.

with typologies helped to start dating our massive haul

The late flurry of activity had been made possible by the generous supply of a mini-digger by the tenant, together with its driver who charmed everyone with the fuelled good humour, as well as removing the need to shovel tons of soil and debris. As it was the return of the digging continued until 6 o'clock. Cutting it fine indeed. A few last-minute Total Station levels and it was all over.

Then all the fortnight's volunteers, together with our supervisors and organisers sat down to barbecued sausages, chicken and a superb spread of salad bits and let our communal hair down. The promoters (led by Don the cigar) presented Julia with a gift which would help her overcome her snagged nail which she had been bemoaning, as overheard earlier by a poor digger on his hands and knees desperate for rehydration and medical attention.

This excavation has, unsurprisingly, raised more questions than answers, and its smooth running and happy volunteers auger well for a third event in 2009, dates for your diaries: 1st-16th August. Now, does anyone have a direct line to whoever controls the weather?
